

The techniques used to protect the banks in the Nalón River are:

- Installation of a permanent erosion control netting to protect the bancs of flows of 6m/s during flooding and also allow to grow riparian vegetation.
- Installation of a lineal structured fibre roll in different levels to prevent erosion.
- Plantation of willow stakes to guarantee a quick vegetation of the zone.

The applied products are:

- C350 from North American Green
- Fiber roll<sub>TM</sub>
