

## PLANT CARPETS - MÜNCHEN, NYMPHENBURG-BIEDERSTEINER KANAL

Plant carpets onsite ready for installation. The plants have developed a dens root system with runners and rhizomes.

Development three months after installation. As the riparian plants mature they withstand higher floodwater flowing speeds or other impacts such as grazing or access by people.

The planting along single stretches of the watercourse add to the diversity of its habitats. The riparian zone is structured to allow different types of habitats to develop.
